

Thank you both for your time on Tuesday July 10, 2012. We were able to gather the information necessary to reach a decision on the next course of action. I set up appointments with BRCC and CATC, and it was a pleasant surprise to discover the schools plan to work together in the future.

I'm not sure how Clean Harbors' management will decide to proceed, but my understanding from my management is that they will put some form of Scholarship Program in place. Our original conversation was for two individuals (male and female) to receive a scholarship for two years. This would be available every year for two individuals. The length of time the scholarships would be offered was not determined. The scholarships would support tuition for 4 semesters, and we had been discussing an amount in the \$4000 a year range for each scholarship. We talked about the possibility of one person at each school. This was all before our meeting with you, but I am under the impression that these original ideas are still under consideration.

Clean Harbors and the Environmental Protection Agency work together on the Devil's Swamp Lake Site. This project is an outreach effort for residents who live closest to this site and have expressed interest in Industry giving back to the community by helping local students. My role in this is to help make it happen.

Deleted: all of

I look forward to being able to pull this all together and developing a win-win situation for all the parties involved.

Sincerely,

Bill
